

Multi-cross lasers 4 x 360°

CL4R LCD / CL4G LCD
CL4B LCD / CL4V LCD

Precise measurements
very well visible, thin laser line,
millimeter accuracy

Versatile use
full 360 ° work control, inside and outside,
slants

Long range
30m (with sensor 70m)

Intuitive operation
with control from onboard Bluetooth
mobile devices, OLED display

Efficient power supply
universal battery Nivel Li-ion

Proven, durable equipment
robust metal-reinforced casing,
metal head shield

Measurement solution
for construction

NIVEL SYSTEM

Multi-cross lasers 4 x 360° with LCD

The best friend at the construction site

CL4 LCD series are the multi-purpose 4D cross lasers. Perfectly levelled reference lines (horizontal and vertical, each in the range of 360°), are projected on surfaces by the laser heads to support variety of construction and finishing works. The simultaneous projection of the two planes enables to determine right angles. This option is particularly useful for construction and tiling applications While the compensator locked the unit can also be tilted, thus work in slant planes. The built-in 1/4" thread enables steady fastening the equipment to a tripod, adapter or laser shelf. The rubber protectors at the corners of the device body prevent from abrasion, shock or impact as well as provide a better grip.

	CL4R LCD	CL4G LCD	CL4B LCD	CL4V LCD
Laser beam	red 638 nm	green 515 nm	blue 505 nm	violet 450 nm
Accuracy	±2,0 mm / 10 m			
Beam display / planes	2 vertical 360°, 2 horizontal 360°			
Range of operation	30 m (70 m with sensor)			
Bluetooth	yes			
Self-leveling range	±3,0°			
Resistance class	IP54			
Power supply	Li-ion 3,7 V (8000 mAh)			
Operating temperature range	-10° do +50°C			
Mount	1/4", 5/8			
Dimensions	148 x 90 x 151 mm			
Weight	0,92 kg			

Easy and quick measurement

We have four beam colors available.

If you're working in darker rooms, choose red. For bright, sunny interiors, the green beam is better. If precision is key, choose the ultra-thin blue beam. The violet laser is perfect when other lasers are working on the construction site, eliminating errors.

Versatile application

Laser allows to work with horizontal and vertical beams. The planes can be displayed separately or combined.

Reliable on site

Resistant to dust and water (IP54). In addition, the laser body has been reinforced with metal elements, making it durable and will prove itself in difficult conditions on the construction site.

Comfortable operation

An intuitive control panel. Function management, including the precise adjustment of the beam, is performed quickly and efficiently.

Equipment

Laser crossliner	Floor target (2 pcs)
Laser target	Multi-adapter
Li-ion rechargeable battery	USB „C" type charger
Laser lift	Carrying case
